

Evidence Synthesis Methods Across Disciplines: A Short Review

GhostCite sample document

1. Introduction

This short review is a sample document for GhostCite. It was written to look like a typical manuscript whose reference list was partly drafted with a language model. Some references below are real and correctly cited; others have a wrong year, a venue the paper never appeared in, a reworded title, replaced authors, or do not exist at all.

Systematic reviews follow the PRISMA statement [2], and diagnostic studies often report ROC curves [3], [9]. Sequence models based on attention [1] and residual networks [7] dominate machine learning, while evolutionary search [4] remains popular in engineering. Decision making under risk [5], asset pricing [10] and theories of justice [6] are cited in economics. Clinical descriptions of new diseases [8] and new diagnostic panels [11] complete the list.
